## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1,9,10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaul et al (US 4,054,753).

Kaul et al discloses a synchronous network comprising;

a plurality of nodes (stations) transmitting data to one another in a predefined sequence for a predefined duration (TDMA), wherein nodes outputting a sync signal defining a reference time for synchronizing the plurality of nodes, the sync signal having a duration longer than the maximum signal transit time in the network and

a respective node wishing to synchronize with other nodes outputting the sync signal and data with an identifier after outputting or receiving the sync signal. See Fig.1 and col. 3, line 51 – col.4, line 40.

### *Claim Rejections - 35 USC § 103*

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kaul et al as applied to claim 1 above in view of Dillon et al (previously cited).

Art Unit: 2611

Kaul et al discloses all the claimed subject matter but for for a specific encoding scheme for the synchronization signal, which has a time profile or a duration such that it can be identified as such even if other synchronization signals by other nodes are overlapping. However, the NRZ coding, XERXES coding and Manchester coding are well known in the art for transmitting digital bits, as evidenced by a patent to Dillon et al (see col. 5, lines 28-29) and thus would have been obvious matter of design choice to one skilled in the art at the time the invention was made, lacking criticality.

***Allowable Subject Matter***

5. Claims 5,6,8,12,13,14 are allowed.
6. Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2611

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
